# Analyzing and visualizing tweets of WeRateDogs
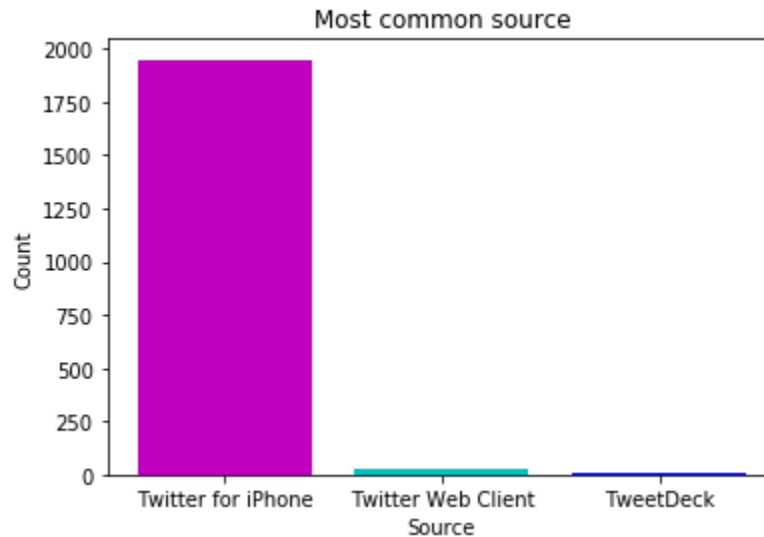

By Ramy Khaled

WeRateDogs account on twitter which rates people's dogs. A college student named Matt Nelson started the account in 2015. It has now 8.9M followers and the account is active all of the time. The rating for the dogs should be from zero to 10 but sometime a dog can exceed the maximum and can take 12 or 13 in the numerator value (12/10). In this analysis we will know more about data extracted from WeRateDogs account.

The most common DoggoLingo (puppo,doggo,etc.)

As we see here, pupper is the most used DoggoLingo in the tweets. It came in the first place with more than 200 times.
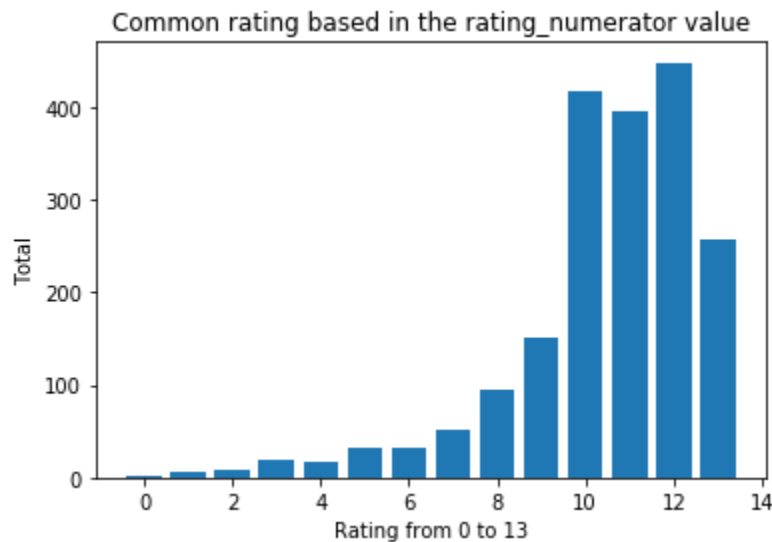

The most common source

As we see, the most common source that people tweet from is the Twitter application for IPhone with a very different value from other sources as Web or TweetDeck.

Best dog tweet based on the number of retweets

As we see, the most retweeted tweet is a video of a dog who swims with rating 13/10 and a doggo is the DoggoLingo. I has 13.1M views.

Most common rating based on the rating_numerator value

Common rating based in the rating_numerator value

The most common rating is from zero to 13 is 12 which is exceeds the maximum and it is given to the very cute dogs.

Compare between favorites and retweets

This plot gives us a very big insight, it does not matter how many favorites the tweets gets as for the retweets values any tweet is half or below half the value of the favorites.
